

Swiss Expedition To Use Oxygen In Everest Attempt

LONDON — A Swiss expedition disclosed that it will use oxygen tanks in an attempt to scale towering Mt. Everest this spring. It was better news to many climbers who feel that the use of such aid is not entirely sporting. But experts here warned that it probably is a matter of using extra oxygen or failing.

A British expedition already has decided to use oxygen, but it is an attempt to conquer Mt. Everest that will be headed by Dr. Eduard Whymper, who thinks he has found a possible route up from the hitherto unexplored southeast end of the mountain.

The lack of oxygen at such heights has had a telling effect on Mt. Everest expeditions. In 1921, and some persons have been killed. At 10,000 feet of the peak, the air is so thin that it is as if they were dead.

Stained Glass Window Hidden 50 Years Found

MONTREAL — A stained glass window portraying early Canadian history, hidden for 50 years behind an elevator shaft, was uncovered by workers installing a new elevator in the Courtline building.

Owners of the building at 418 St. James street, said it had been installed in 1862 when the building was erected by its owner, Stanley Smith, who sought the glass panel from his home.

Coveline was a prominent fur dealer.

The window is actually visible from a courtyard at the rear of the premises but, since no light passes through it, its colors and lines are not seen. Whymper says it is a fine work of art.

The window, which is level with the main floor, has two pictures, the top showing a group of men in 18th-century hunting dress, and the bottom showing a group of men in 19th-century hunting dress.

The window's colors are somewhat faded, but the design is still clear. It is in the quiet style of a Carriac and two part.

This scene may be considerably older than the records show, since no one knows where Mr. Coveline lived. It is a possibility that the scene was painted in the 18th century.

Steve Taylor, 65, explained that he was the only one left in the building with his truck in 1929. "I sold the truck," he said.

Traffic Referee John M. Wise said that after this meant he would sell the truck.

"Well, I can't pull the wagon any more," he said.

Wise then shifted the blame to the truck, which he charged with making the testimony it appeared the horse was color blind.

Research Improved Quality Of Butter

A high level of quality in Canadian butter has already been achieved with the introduction of scientific methods.

According to problems further investigated by the Canadian government, the following is a list of the factors.

1. A. Gibson of the Department of Agriculture, Federal Department of Agriculture.

2. Although the dairy industry is one of the most important in the world, the art of butter making was practiced more or less in the dark for centuries.

3. The establishment of creameries and butter factories in the last 75 years that real progress has been made in the industry.

4. The quality of the present standard of quality in Canadian butter.

Frenchman Really Has Brand New Idea

LONDON—A 56-year-old Frenchman arrived wearing a cap and coat, and a pair of trousers.

Salmon "Boost" New Fishway Completed In British Columbia

VANCOUVER.—Construction crews have finished the latest section of a million-dollar highway for salmon through the Fraser Canyon at Halls Lake.

A new high-level fishway was ready for the early summer run of salmon. In the past, this run has come up against the natural high water mark on the Fraser, which hinders the low-salmon water level.

The new fishway will allow the low-salmon water level to rise and sweep anything not built like a bathtub. In 1948, the river rose to a maximum height 101 feet above its normal water mark.

Cost of the new section was \$135,000. There are now four fishways in the Fraser Canyon. The new section is the longest and the most expensive.

The fishway is a project of the Federal Government, through the Fisheries Commission, a joint Canadian-American agency, to restore the Fraser Canyon to its former glory.

Professor Believes Grasshopper Is Intriguing Insect

Understanding an insect—fascinating enough with his habits and getting an insight into what makes him tick—is an important part of the study of the grasshopper.

Dr. J. Spencer, professor of zoology at the University of British Columbia, Vancouver, has just completed an exhaustive study on British Columbia grasshoppers.

There are 19 species of grasshoppers in the province, Dr. Spencer said. He presented at the annual meeting of the Entomological Society of Canada, which is being held in Vancouver.

Dr. Spencer said that the grasshopper is a very interesting insect. It is a very common insect in the province and is found in all parts of the province.

ROYALTY PAYS RESPECTS TO SKIPPER—Prince George of Denmark holds a match to a cigarette for Captain Henrik Rort Carlsen at the reception in the shipper's honor at the Danish club in London. Carlsen is wearing the Order of Dannebrog, just presented to him by Danish Ambassador Count Revellin for staying with his ship, the *Pyting Enterprise*, until she sank off the south coast of England.—Central Press Canadian.

DISCUSSES FINANCE IN LONDON—Canada's finance minister, D. C. Abbott, (left), chats with South African finance minister, N. C. Havenga during a meeting of commonwealth finance ministers at the treasury in London. The meeting concentrated on problems arising out of the sterling area's gold and dollar resources.—Central Press Canadian.

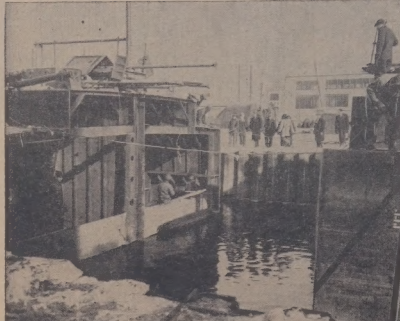

FOR HOW LONG?—Minister of Justice Edgar Faur, (above), 43, French Radical Socialist party leader, has been chosen Premier of France by a four-to-one National Assembly vote. The communists also opposed him. Followers of Gen. Charles de Gaulle abstained. All others approved.—Central Press Canadian.

INVESTIGATE DEATH OF AMERICAN NUN—A British military court of inquiry is investigating the death of Sister Anthony, 55, shot on the steps of the convent of the Sisters of Charity in Jerusalem during a gun battle between Egyptian and British forces. Sister Anthony was a U.S. citizen and the U.S. consul in Cairo said that "important revelations" were certain.

ONLY ONE OF ITS KIND IN THE AIR—Pictured for the first time in flight, the GAN-4, a delta wing all-weather fighter, presents an unusual shape as it zips at 4,000 mph through the air over London. Claimed by the R.A.F. to be the only fighter of its kind in existence, the craft's speed, maneuver and radar equipment are listed as "top secret".—Central Press Canadian.

UNUSUAL FEAT OF ENGINEERING—The tedious job of cutting the tanker *Transbay* in two and edging 30 feet in the middle is nearing completion. The *St. Lawrence Drydock*, of Montreal, where more ships have had their faces lifted than in any other Canadian port, is carrying out the reconstruction project which is expected to take from six to eight weeks to complete. The photo shows the front part of the ship being floated to a position 30 feet from the stern half.

FOR ROYALTY—This is Botha House, the country residence of South Africa's Premier, on the coast some 50 miles south of Durban, Natal, which will be the home of King George, Queen Elizabeth and Princess Margaret for part of their stay in South Africa. The house was a personal gift from the late Sir Frank Reynolds, Natal sugar chief, and an admirer of South Africa's first premier, Gen. Louis Botha. The house is surrounded by 1,500 acres and has a private beach and a golf course.

PRIME MINISTER OPENED NEW 500 ARMORIES—In South St. Marie, Ont., Prime Minister St. Laurent, (center), opened a new armory, and Defence Minister Brooke Claxton, (right), talk with Lt.-Col. L. H. Dwyer, R.C.A. The armory, costing \$1,000,000, is the first built in Canada since the end of the war. Mr. St. Laurent, at the opening ceremony, urged young Canadians to join the services.—Central Press Canadian.

EMBARRASSING MOMENT FOR EGYPTIAN POLICE—An operation intended to catch guerrillas who have been sniping British troops in the controversial Canal Zone area for months past resulted in the taking into custody of 150 armed Egyptian police after Grenadier and Coldstream Guards cut down off Tel-el-Kobar and the contiguous village of El-Hamidi recently. Some of the policemen, hands clasped on heads, are shown being escorted to a detention point by armed guards. British troops now have undertaken a house-to-house search for lurking guerrillas and ammunition caches.

SAILBOAT HIDES OUT ATLANTIC GALE—With a lifeboat standing by, the storm-battered 274-ton four-masted Panfil drifted helplessly in the English channel, 300 miles from where the *Pyting Enterprise* sank. British lifeboats stood by in preparation to remove 40 German merchant marine cadets from the vessel. The Panfil, which lost one of its anchors in a North Sea gale, carries 50 crewmen in addition to the cadets. It is on a wind-circled voyage with the cadets and is carrying a cargo of cement from Hamburg to Rio de Janeiro. The shipper and his crew planned to remain aboard the vessel and to continue the voyage in spite of the gale damage.—Central Press Canadian.

WON'T SAY YES OR MAYBE—In London rumors persist of a forthcoming marriage between Princess Margaret to Scottish nobleman the Earl of Dalhousie. The princess recently completed a week's visit to the Earl's family home in Scotland. This photo shows the princess, (right), with Dalhousie and his mother, the Duchess of Dalhousie. Buckingham Palace sources neither deny nor confirm the rumors.

TRUMAN ANSWERS PERSONAL APPEAL—A personal invitation from President Truman brings John Skoulharis, 28, Greek war veteran, from Athens to the U.S. for treatment by plastic surgeons. His face was mutilated by Communist guerrillas when they captured him in the Thessalonian hills two years ago. A missing ear is among the scars revealed as John looks into a mirror. Last May he wrote, President Truman who arranged for special care in a U.S. army hospital.—Central Press Canadian.

PRINCE PHILIP'S MOTHER IN U.S.—Prince Alice of Greece, mother of the Duke of Edinburgh, has arrived in the U.S. on a self-appointed task. The granddaughter of Queen Victoria is there to raise funds for the "School of Mercy" which she founded in Athens.—Central Press Canadian.

Playoff Nerves

At some time or other practically every athlete is emotionally affected by nervousness or fear. And one of the most important play time in drawing near the prize game tension factors are more uneasy than ever.

To become a real star, an athlete must do well under pressure and must be able to control his emotions and the fear of the play and nerves will have to be kept under the competitive and his action, especially during important moments, will increase a great deal.

Perhaps the most common and most harmful type of nervousness is that which comes before a game or test. Some persons have sick stomachs, profuse sweating, clammy hands, headache, tight muscles, a racing heart, or weakness, shakiness and a jittery imagination.

Here are the basic rules for fighting that type of tension:

On the day of the big game keep busy.

Whenever your mind drifts back to the coming game, order your

thoughts to your own particular duties.

Keep busy in the dressing room. Don't sit and worry. If necessary go over all your equipment and tell others to get ready.

Warm up seriously before the game. Practice hard what you will be doing in the game.

Remember that the game and make sure you eat lots of 6 complex vitamins and green vegetables.

If possible, try to avoid all arguments and irritating discussions on the game day.

The two fears that bother athletes most are fear of failure and fear of injury. Most of you are in good condition and have practiced well in the gym. And if your practices were concentrated on skill development it will eliminate the fear of failure.

Great athletes are afraid of nothing or nothing. So if you are fearful or nervous that he should be ashamed to use a pro.

Some of the great athletes of all sport stars of all time depended on prayer to take care of them and according to the record book they were winners.

Another good idea to relieve that tension is to remember that the game is just as important to the players as you are. And you are better prepared for those early jitters you will make matters worse for them.

Great playing starts to concentrate on relieving any nervousness by your own team members. By helping them, they will be helped by you.

Here is what to do during those last frantic minutes before the big game:

If your muscles feel tight and hot, take a few deep breaths. Then sit or lie down and tighten all your muscles at the same time. This will help to relax them.

If your muscles feel tight and hot, take a few deep breaths. Then sit or lie down and tighten all your muscles at the same time. This will help to relax them.

If your muscles feel tight and hot, take a few deep breaths. Then sit or lie down and tighten all your muscles at the same time. This will help to relax them.

If your muscles feel tight and hot, take a few deep breaths. Then sit or lie down and tighten all your muscles at the same time. This will help to relax them.

Testing Seeds For Germination

Large acreages of peas and corn are planted each year for coming, and the initial cost of the seed is high. To ensure a good uniform stand in the field, the grower should know the germination capacity of the seed he uses before planting.

Seeds are the resting stage in the development of the plant and its constant supply of food to support it while it is producing its first roots and leaves. Three essential factors in starting seed to grow are temperature, moisture and aeration. Moderate low temperature seeds are accustomed to begin growth in the early spring, while high temperature seeds are more active when the ground is warm.

Peas and broad beans moderately low temperature seeds, require a constant temperature of 48 degrees. Beans require a moderate amount of moisture whereas broad beans require a moderate amount of moisture more moisture during the early stages of germination.

Peas and broad beans, field beans and soybeans, high temperature seeds, require a moderate amount of moisture and aeration. Moderate low temperature seeds are accustomed to begin growth in the early spring, while high temperature seeds are more active when the ground is warm.

Edmonton Youth Best Young Flyer

OTTAWA—A few weeks ago a quiet, shy 18-year-old Edmontonian took his first step up for the first airplane ride of his life. The first step was a jump from a former merchant seaman's plane.

His name, Roger L. Neill, had logged less than 40 hours flying time, but he was the best young flyer in the country.

He was in an interview. "He wants to be a pilot," he said. "He wants to be a pilot," he said. "He wants to be a pilot," he said.

He was in an interview. "He wants to be a pilot," he said. "He wants to be a pilot," he said. "He wants to be a pilot," he said.

He was in an interview. "He wants to be a pilot," he said. "He wants to be a pilot," he said. "He wants to be a pilot," he said.

He was in an interview. "He wants to be a pilot," he said. "He wants to be a pilot," he said. "He wants to be a pilot," he said.
